Guillaume Lagarde  
(LaBRI)

- ⊙  $(\Gamma, \Delta)$  is a metric space
  - $\Delta(a, b) \leq \Delta(a, c) + \Delta(b, c)$

- ⊙  $(\Gamma, \Delta)$  is a metric space
  - $\Delta(a, b) \leq \Delta(a, c) + \Delta(b, c)$
- ⊙ **Ultrametric:**  $\forall a, b, c \in \Gamma,$

$$\Delta(a, b) \leq \max\{\Delta(a, c), \Delta(b, c)\}$$

⊙  $(\Gamma, \Delta)$  is a metric space

○  $\Delta(a, b) \leq \Delta(a, c) + \Delta(b, c)$

⊙ **Ultrametric:**  $\forall a, b, c \in \Gamma,$

$$\Delta(a, b) \leq \max\{\Delta(a, c), \Delta(b, c)\}$$

⊙ **Cool Property:**  $\forall a, b, c \in \Gamma,$

$$\Delta(a, b) = \Delta(a, c) \text{ or } \Delta(a, c) = \Delta(b, c) \text{ or } \Delta(a, b) = \Delta(b, c)$$

# Example

$\Delta: \text{Leaves} \rightarrow \mathbb{R}^+$

$$\Delta(x, y) = w(\text{LCA}(x, y))$$

$w$  is non-increasing from root

# Example

$\Delta: \text{Leaves} \rightarrow \mathbb{R}^+$

$$\Delta(x, y) = w(\text{LCA}(x, y))$$

$w$  is non-increasing from root

$$\tau : X \rightarrow L, \quad \forall x, y \in X,$$

$$\|x - y\|_p \leq \Delta(\tau(x), \tau(y)) = w(\text{LCA}(\tau(x), \tau(y))) \leq \rho_{\text{OPT}} \cdot \|x - y\|_p$$

$$\{a, b, c, d, e\} \subseteq \mathbb{R}^{100}$$

# Motivation: Data Visualization

$$\{a, b, c, d, e\} \subseteq \mathbb{R}^{100}$$

A handwritten matrix on a piece of paper. The columns are labeled 'a', 'b', 'c', 'd', and 'e' at the top. The rows are labeled 'a', 'b', 'c', 'd', and 'e' on the left side. The matrix is enclosed in large square brackets. The values in the matrix are: Row 'a': [0, 1, 1.5, 2, 1]; Row 'b': [1, 0, 1, 1, 2]; Row 'c': [1.5, 1, 0, 1.5, 1.5]; Row 'd': [2, 1, 1.5, 0, 2]; Row 'e': [1, 2, 1.5, 2, 0].

	a	b	c	d	e
a	0	1	1.5	2	1
b	1	0	1	1	2
c	1.5	1	0	1.5	1.5
d	2	1	1.5	0	2
e	1	2	1.5	2	0

# Motivation: Data Visualization

$$\{a, b, c, d, e\} \subseteq \mathbb{R}^{100}$$

	a	b	c	d	e
a	0	1	1.5	2	1
b	1	0	1	1	2
c	1.5	1	0	1.5	1.5
d	2	1	1.5	0	2
e	1	2	1.5	2	0

## Theorem (Farach–Kannan–Warnow'95)

Given the distance matrix of  $n$  points, the optimal ultrametric embedding can be computed in time  $O(n^2)$ .

## Theorem (Farach–Kannan–Warnow'95)

Given the distance matrix of  $n$  points, the optimal ultrametric embedding can be computed in time  $O(n^2)$ .

## Theorem (Cohen-Addad–K–Lagarde)

- ⊙ Assuming SETH, no 1.5 approximate embedding in  $n^{1.99}$  time from  $\ell_\infty$ -metric.

## Theorem (Farach–Kannan–Warnow'95)

Given the distance matrix of  $n$  points, the optimal ultrametric embedding can be computed in time  $O(n^2)$ .

## Theorem (Cohen-Addad–K–Lagarde)

- ⊙ Assuming SETH, no **1.5** approximate embedding in  $n^{1.99}$  time from  $\ell_\infty$ -metric.
- ⊙ Assuming **non-standard** hypothesis, no **1.001** approximate in  $n^{1+o(1)}$  time from **Euclidean** metric.

## Theorem (Farach–Kannan–Warnow'95)

Given the distance matrix of  $n$  points, the optimal ultrametric embedding can be computed in time  $O(n^2)$ .

## Theorem (Cohen-Addad–K–Lagarde)

- ⊙ Assuming SETH, no **1.5** approximate embedding in  $n^{1.99}$  time from  $\ell_\infty$ -metric.
- ⊙ Assuming **non-standard** hypothesis, no **1.001** approximate in  $n^{1+o(1)}$  time from **Euclidean** metric.
- ⊙ For any  $\gamma \geq 1$ ,  **$5\gamma$**  approximate embedding in time  $O(n^{1+\frac{1}{\gamma^2}})$  for Euclidean metric.

## Theorem (Farach–Kannan–Warnow'95)

Given the distance matrix of  $n$  points, the optimal ultrametric embedding can be computed in time  $O(n^2)$ .
